

RISK ASSESSMENT AND DISSEMINATION

Integrate into your security stack and reduce your attack surface with threat alerts, real-time measurement of risk, and tailored recommendations for mitigation.

An ever-changing cybercrime underground requires specialized intelligence to mitigate the risk of attack.

Many Small-to-Midsize Businesses (SMBs) and Managed Security Service Providers (MSSPs) seek solutions that help with understanding intelligence relevant to organizations.

KELA's platform provides visibility into an SMB's attack surface from the attacker's perspective, arming SMBs and MSSPs with the information and insight they need to stay on top of threats and ensure that they protect themselves or their clients.

OVERVIEW

HOW IT WORKS

Measured Risk

The platform simplifies security assessments by calculating risk levels in real time, so you can understand your exposure and take appropriate action.

Prioritized Response

The platform narrows your attack surface by automatically and continuously monitoring millions of leaked records to identify breaches that directly impact your organization. It delivers tailored recommendations that enable you to focus on specific solutions and quickly reduce the risk of attack.

Collaborative Workflows

KELA's platform offers easy-to-use collaborative workflows. Bookmark and resolve alerts directly through your workspace, or leave notes and attachments for other team members.

”

We have been highly impressed with KELA's cybercrime expertise. Other than an outstanding platform, the team is highly technical, very responsive, and would bend over backwards to get things done.

Cyber Solutions Director, US-based Enterprise

BENEFITS

Informed action

Alerts, prioritized based on their levels of risk, help you understand your exposure and determine appropriate actions to take

Timely insights

Maintain a reduced attack surface by continually lowering your risk level through actionable insights

Broad protection

A multi-tenant design enables organizations everywhere to monitor, measure and respond to diverse workspaces

POWERFUL FEATURES

Automated attack surface intelligence

100% automatic delivery of targeted attack surface intelligence

Real-time alerts

Proactively take action on intelligence to eliminate immediate risks

Targeted, actionable intelligence

Monitor specific assets to receive only targeted and actionable intelligence

Reduced attack surface

Efficient detection of cybercrime threats helps users maintain a reduced attack surface

Seamless integration

Easily integrates with other security technologies through API

Simple configuration

Simple to use and quick deployment for immediate monitoring of assets
