NovaGuard

360° Network & Endpoint Security with 24/7 Service

Product Overview

Constantly evolving cyberthreats need a modern approach to endpoint security. On top of the traditional signature-driven security NovaGuard offers advanced technology to pro-actively protect against ransomware, malware and other cyberthreats. NovaGuard covers the whole attack cycle (pre-attack, during attack & post-attack) with industry leading detection and response capabilities.

The comprehensive tracking of all enterprise assets allows a high transparency on all endpoints and a real-time detection of rogue elements. Customers can rely on pro-active protection against unpatched security vulnerabilities with NovaGuard's hot-patching capabilities. In addition NovaGuard allows micro-segmentation to prevent threat spread and enhance security operation. With fast identification & mitigation of malicious east-west (lateral propagation) and north-south (command & control) communication customers can fully rely on NovaGuard for their endpoint security.

NovaGuard constantly delivers innovative functionality to respond to the fast evolution of cyberattacks. With the ransomware honeypot capability NovaGuard can trigger hidden threats on all endpoints via an irresistible bait for ransomware leading to a proactive detection & mitigation of malware, APTs and other rogue elements. Despite all its innovation NovaGuard support covers even legacy operating systems like Windows XP and Windows Server 2003 as they are often still embedded in the endpoint infrastructure and especially targeted by hackers.

Core Capabilities

Industry-leading detection and response for endpoints incl. enterprise asset tracking & rogue identification.

Professional endpoint hardening with hot patching for unpatched security vulnerabilities and micro-segmentation.

Innovative features like ransomware honeypot for full protection against ransomware, but also legacy OS support.

Customer Values

01
Full visibility on all endpoint activity, real-time containment and mitigation of malware & APTs.

02
Professional risk management with fast closing of security gaps, asset tracking and micro-segmentation.

Supported OS: Windows, macOS, CentOS, debian, ORACLE Linux, redhat, SUSE, ubuntu

Streamlined Security Operation

Release the full potential of NovaGuard in combination with NovaCommand. Comprehensive detection and response of all cyberthreats in your network and on your endpoints will deliver a 360° protection for your data and against ransomware attacks.

With our ForeNova platform & services we enable our customers to orchestrate their security infrastructure to use the complete existing toolkit to detect & respond to any cyberincident in the best possible way. No more silos in your security infrastructure, just immediate counter on any cyberattack.

ForeNova already offers integration with other major security solution vendor and is able to quickly integrate with any other existing solution via its flexible modern API.

Other ForeNova Solutions

- NovaMDR**
- A professional managed detection & response solution for your network with 24/7 surveillance by dedicated cybersecurity specialists for fast alerting & response to cyberattacks. The perfect combination of top-notch technology & human expertise.
- NovaCommand**
- Best-in-class NDR solution to automatically detect threats in your network. Customizable playbooks can orchestrate immediate responses. NovaCommand offers integration with all major security solutions and is a must-have addition to traditional endpoint security & firewall solutions.
