D-View 8.v24 Network Monitoring

Flexible and versatile, D-View 8 uses advanced web technology to provide a comprehensive standards-based management tool designed to centrally manage, monitor and maintain critical networks.

D-View 8 is a comprehensive wired and wireless network management tool based on the server and probe architecture, supporting the troubleshooting, configuration, performance and security of your network. It provides end-to-end business management of IT, scalability of system architecture, and accommodation of new technology and infrastructure while supporting the management of D-Link and third-party devices.

D-View 8's SD and EP license options can manage up to 5000 nodes and handle any network requirements, from SMBs to enterprise deployments. The EP Edition has richer features and supports multiple server probes locally or remotely across multiple sites and networks.

Real-Time Network Analytics

Centralized Reporting

sFlow Analyze

Highly Flexible and Scalable Deployment

Role-Based Administration

Rich Resource Management

Intuitive Dashboard

Inventory Management

Service Monitoring

Batch Configuration

Features

Real-Time Network Analytics	Real-time network analysis provides insight into network operations, where network visibility is extremely important. With D-View 8 you can gain insight on device statistics, critical alarms of managed devices, running status of wired and wireless devices, CPU/memory utilization, wired and wireless throughput of devices.
sFlow Analyser (EP version only)	D-View 8 uses sFlow analyzer to detect network anomalies in your organization, especially when the network is large and complex. It helps collect the sFlow data from devices and generate related statistics reports.
Role-Based Administration	Provides administrators with both the tools and the ability to grant access and privileges to only those features and resources operators need.
Intuitive Dashboard	The user-friendly dashboard can be customized to your needs for network device overview, device statistics, alarm statistics, cpu/memory utilization, response time, temperature and many more.
Centralized Reporting	Provides performance of administrator, operator performance, and options for resource reporting Configuration and configuration changes, network device and connection status, for network properties, Alarms, and the health of network equipment. Report types are issued in real time and personalized easily. Device data is given for status, mark, IP address, MAC address, type of device, model, supplier, the location and many more.
Highly Flexible and Scalable Deployment	Depending on your network size, D-View 8 has you covered with a whole suite of network capabilities and deployment options.
Rich Resource Management	Provides the exploration and topology of the network, including comprehensive network inventory and precise representations of how it is configured. Sponsored views include both Layer 2 and Layer 3, as well as Like VLAN topology and the ability, like a dashboard homepage, to create custom views.
Inventory Management	Provides holistic management using a single pane of glass for multi-vendor devices. Administrators can access tools to control and monitor several facets of a network topology, IP, or custom view, the system connects devices to the network and displays devices. Administrators may also assess a system's health through the specifics of the device page, which reveals real-time data, summary information, connectivity testing, and more.
Batch Configuration	Configure multiple devices at the same time using SNMP or telnet.
Firmware Management	Conveniently upgrade firmware for multiple devices from a centralized location.
Service Monitoring	Monitors the availability and responsiveness of common network services via probes that you configure. The probes reside on local and remote D-View 8 software agents and test services from servers and devices that you select when configuring the probes.

Features

System Configuration	
Basic Settings	 Organization Configures the organization's name, country, time zone, etc Upload the organization logo in PNG or JPG file format (less than 2MB file size)
	Mail Server: Configures mail server information and associated parameters
	 Forward Trap: Configures the trap receiver to receive incoming device trap messages
	 Forward Syslog: Configures the system log receiver to receive incoming device syslog messages to the D-View server
	 REST API Key Generation (EP version only): To generate the API key which will be used by other application to acquire a token from D-View 8 Third party applications can use tokens to acquire needed information from D-View 8 without sending username and password
	 SNMP Protocol Preference: Configures the SNMP protocol types, community name and related parameters
	 sFlow Settings (EP version only): Configures sFlow collector's associated information
	 System Preferences: Configures the table display parameter and theme of D-View 8
User Management	 Users: Listing user information which contains user's email address, user name, login time, authentication type etc. Add, delete, remove users. Role Privileges: Listing the types of user role which includes Organization/ Site/ Network Administrator roles. Listing each role's associated function privilege. AD Server: Configures the Windows Active Directory Server's information. RADIUS Server: Configures the RADIUS Server's information. Supports Primary and Secondary RADIUS Server configuration
Scheduling	 Configures the "Recurrent Schedule" and "Time Range Schedule" Recurrent Schedule: Allows user to configure recurrent schedules with customized frequency and duration Time Range Schedule: Allows user to configure a specific range of time, such as work hours or holidays
Server Management	 To monitor the status of D-View Core Server, Web Server and Probe To check the real-time report of each server's status, which includes the utilization of CPU memory, hard drive and the network traffic
D-View 8 Logs	 D-View 8 features three types of logs: User Operation Log, System Log, Device Maintenance Log User Operation Log: Keeps the records of user's sign in and sign out status System Log: Keeps the records of D-View 8's running status for server and probes Device Maintenance Log: Keeps users' configuration action log for devices

Features	
About Page	The About page keeps the following information: • D-View 8's edition, such as SD or EP • Brief description for the purchased edition • Software version • The latest update date • The number of supported and used nodes • System uptime information • Days remaining on mantenance license • A link to the maintenance licensing
Dashboard	
Analysis	 By default, there are six tabs in the analysis page, user can click each tag to display dedicate information. The Analysis page includes following tabs: Overview Switch Wireless Host sFlow (EP version only) PoE Provides an overview of alarm statistics, on/off-line status, CPU/memory utilization, performance status, traffic statistics, and other information Different categories may have slight variations in the information provided
Customized Dashboard	Allows user to configure the dashboard to display the information they need and apply it to the homepage
Monitoring	
Network Discovery	 Allows user to configure the network discovery parameters, which include: Basic Information: the name of the network and site to discover. The discovered devices mange rule Probe Mode: to choose the primary and secondary probe Discovery Range: the range includes single IPv4/v6 Address, an IPv4/v6 Address range, an IPv4/v6 subnet or importing the range from a file Schedule: to define the discovery schedule which includes one-time discovery or recurrent discovery Displays all discovery rules' running status and associated detail information
Device View	 Includes 5 categories: All, Managed, Unmanaged, Ignore and Conflicted Displays several device types: Switch, Wireless, Host and Other Displays the summary and detailed information of each device User can click "System Name" to check each device's detailed information User can click "IP" to select a protocol to log in to the device
Interface View	 Listing devices' connection relationship, which includes: System/Model Name Device's IP address Interface and MAC address information VLAN information Uptime information D-View's organization information Each item in the table provides search capability MAC Locator: user can look up for specific MAC address by using the search function in the "Connected MAC" column.
Topology Map	 Displays connections between devices Displays the on/off-line status of devices Displays the link status of devices PNG or JPG format files can be uploaded as the topology's background image Supports Star, Tree, Circular and Grid type topology maps Zoom in and out the topology map Users can to create customized topologies
Connection View	 Listing the interface link information which includes: Link status Link name Name and IP address of two devices The connected interface of each device The connected devices and interface information Traffic statistics of TX and RX Link utilization Link type (LACP or general) Link's related info update time Source of the detection, such as LLDP or FDB Clicking the link interface name's hyper link, more detailed information will be displayed, such as: Summary information of the selected link Monitor information of the selected link Alarm information of the selected link

Rack View	Provides users visualization of the actual device rack
sFlow Analyzer (EP version only)	 Collects the sFlow data from devices and generates related statistics reports The statistics report information includes: Report based on the source or destination of packets Report based on QoS rules Report based on layer 4 applications
Device Group	Report based on two nodes' conversation Allows users to create device groups
	Device grouping to simplify the firmware or configuration file maintenance
Configuration	
Batch Configuration	 Allows customer to simultaneously configure multiple devices' parameters Two sub-features: Quick Configuration: provides a GUI template for each function to apply the settings to multiple devices Advanced Configuration: allows user creating a profile for a specific type of device and the profile contains multiple features' parameters. User can apply the profile to multiple devices which have the same type/model as the profile.
Task Management	 Lists all user created tasks to understand the execution result This feature includes: Current Tasks: lists the descriptions of current tasks Historical Tasks: lists the descriptions of historical tasks Each task result will include a message to describe the success status. If a failure happens, it will also describe the reason of failure.
Firmware Management	 Allows users to manage device's firmware via D-View 8 Uploading or downloading the firmware to or from the device Upgrading device by specifying schedule If firmware image already exists in D-View 8, user can just select the file without uploading a new one again Displays the failure message to understand the root cause
Configuration	Allows users to manage device configuration via D-View 8
Management	 Users can backup or restore multiple device configuration files at the same time Users can backup or restore the file by specifying a schedule Supports baselined configuration file comparison, auto restore and generate alarm feature
File Management	 Allows users to compare configuration files to verify the differences between the two files Allows users to upload or delete configuration or firmware files on D-View Allows users to set the configuration file as the baselined file
Alarms & Notifications	
Alarms	 Displays all alarm information collected from network devices. The alarms include: Active Alarms Lists all unresolved or unacknowledged network alarms Historical Alarms Lists all resolved or acknowledged network alarms
Trap & Syslog	 Displays the trap and system log receiving from devices or the system. The trap log's information contains Time received Device system name Device IP address SNMP version Trap description Original message of the trap The associated alarm of the trap (Users can select optional columns to display) The syslog information contains: Time received System name of device generating the syslog Device IP address Syslog severity levels Syslog messsages The associated alarm of the syslog (Users can select optional columns to display)
	 The site and network or related devices (Users can select optional columns to display)

D-Link[®]

Features	
Monitor & Alarm Settings	 Monitor Settings Configure the monitor status to let D-View collect data according to the established time intervals Alarm Settings Configure alarm rules to let D-View generate alarms when collected data matches user configured thresholds Configure the CLI to let devices and D-View servers execute when the alarms are triggered Alarmable Items Definition Define the items for customized monitors and set thresholds to trigger alarms
Notification Center	 Allows user to set the notification method when alarms are triggered. The methods include: Web Scrolling Message, Email, App Push Notification and Execute script.
Template	
Device Template	 This feature allows user to easily add a device to be managed by D-View 8 if it's not in the default managed list; a useful tool especially for managing third party devices Allows user to customize device's information by providing: Model Name Device Type Vendor Name Device's System OID (SOID) Panel Template Allow users to expand D-View's monitoring and configuration capabilities for device models. Provide a way to associate the existed monitor and configuration templates
Device Support	 Allows user to create useful information to manage third party vendor and devices, which includes: Vendor information Vendor name Vendor OID Device Category Category name Photo of the category. The file type can be PNG or JPG format (less than 2 MB in size) Device Type Type name Device category (data comes from Device Category) Description
Panel Template	 Includes D-Link default device panel templates For third party devices, user can create customized panels Customizable panel details: Panel name Stacking support status Description Customizable Panel diagrams: Panel logo (PNG/JPG files less than 2 MB in size) Panel height and width Port numbering rule Port layout design using drag and drop
Monitor Template	 Provides different monitoring templates for collection of device information Customizable Monitor Category for classification of monitored data: Category name Unit of the monitored value Data collection protocol (SNMP/ HTTP / HTTPS) Status switch to define whether collected data need to be merged in different time intervals Category description Monitored data source Customizable Monitor Template to monitor and collect defined objects Template name Monitor category chosen Device vendor name Monitor interval Monitor template description Object's monitored OID information Script file to process collected data

Features	
Configuration Template	 Provides multiple configuration templates to configure specific devices via D-View 8 Multiple config templates can be assigned to Device Template to configure a specific device. Customizable Configuration Category templates classified by function Category name Configuration type Template description Category feature parameter information Customizable Configuration Template to configure specific devices via D-View 8 Configuration template to configure specific devices via D-View 8 Configuration template name Vendor name Template description Selected configuration template to configure device Method of configuration (CLI or SNMP) CLI commands list (if selected) Programable GUI object to simplify continuous operation
Report	
General Report Types	Each report type can have configurable parameters such as data range and data collection time interval. When reports are generated, they can be exported immediately, saved to My Report, or upgraded to Scheduled Report according to the configured report parameters. • Device Reports • Device Health • Trap • Syslog • Device Top N • Wired Interface Reports • Wired Interface Reports • Wired Throughput Top N • Wireless Reports • Wireless Client Count • Wireless Traffic • Advanced Reports • Inventory
Scheduled Report Types	Each report type can be a one-time report or recurrent report. User can designate data source device(s) and levels of alarms to be displayed in the reports. • Alarm Report • Trap Report • Syslog Report
Tools	
MIB Browser (EP version only)	 Retrieves and displays MIB data from compiled MIB in readable format Provides a graphical format to read MIB information
MIB Compiler (EP version only)	 Compiles device MIB files into D-View 8 The MIB Compiler allows users to compile standard or proprietary MIBs, but does not accept malformed MIBs. The compiled MIB file can then be loaded and managed only in the MIB browser instead of generating a new built-in template automatically.
ICMP Ping	Checks device operation status and network performance
SNMP Test	Checks device SNMP capabilities using SNMPv1, SNMPv2c or SNMPv3
Trace Route	Checks the route and measures transit delay of packets crossing the network
Command Line Interface (CLI)	Terminal interface for user to connect with device
File Comparison	 Lets user compare differences between two configuration files Differences are highlighted in different colors to identify modification types
Wizard Types	 D-View 7 Upgrade Wizard A guide for upgrade from D-View 7 to D-View 8 Discovery Wizard Discovers the network and add devices to be monitored Monitoring Wizard A guide to generate the topology, dashboard and rack views Alarm Wizard A guide to configure the alarm and notification features
