FORENOVA

NovaTI

360° Network & Endpoint Security with 24/7 Service

Product Overview

Cyberthreats are constantly evolving using new patterns and methods every day. NovaMDR protects customers by advanced network and endpoint behavior analytics combined with the expertise of a professional cybersecurity expert team that constantly having eyes on every suspicious network activity. With the combination of machine learn & AI based technology and human analytics NovaMDR prevents Ransomware attacks by immediate detection & response.

NovaMDR constantly improves the security of your business operation by regular assessment of risks and customized recommendations on minimizing the attack surface of network & endpoints. Even zero-day exploits and so far unknown vulnerabilities that cannot be handled by traditional IT security like firewall and endpoint protection, will be detected by NovaMDR and immediately contained to prevent any damage to business operation.

Ultimately the customer gets a security operation with peace of mind: The most advanced security technology on market, a team of cybersecurity specialists with 24/7 operation time and full transparency what is going on in network & endpoint. No need to worry about new security gaps in your network, no need to hire your own expensive cybersecurity experts and organize their 24/7 operation - just streamlined security operation with NovaMDR.

Core Capabilities

Deep Network & Endpoint Analyzation with a combination of AI, Machine Learning, Threat Intelligence and Human Expertise

Find threats in your network & endpoint infrastructure that are undetectable for your firewall & endpoint security

Cost-effective team of cybersecurity expert with 24/7 operation to have immediate response on cyberthreats
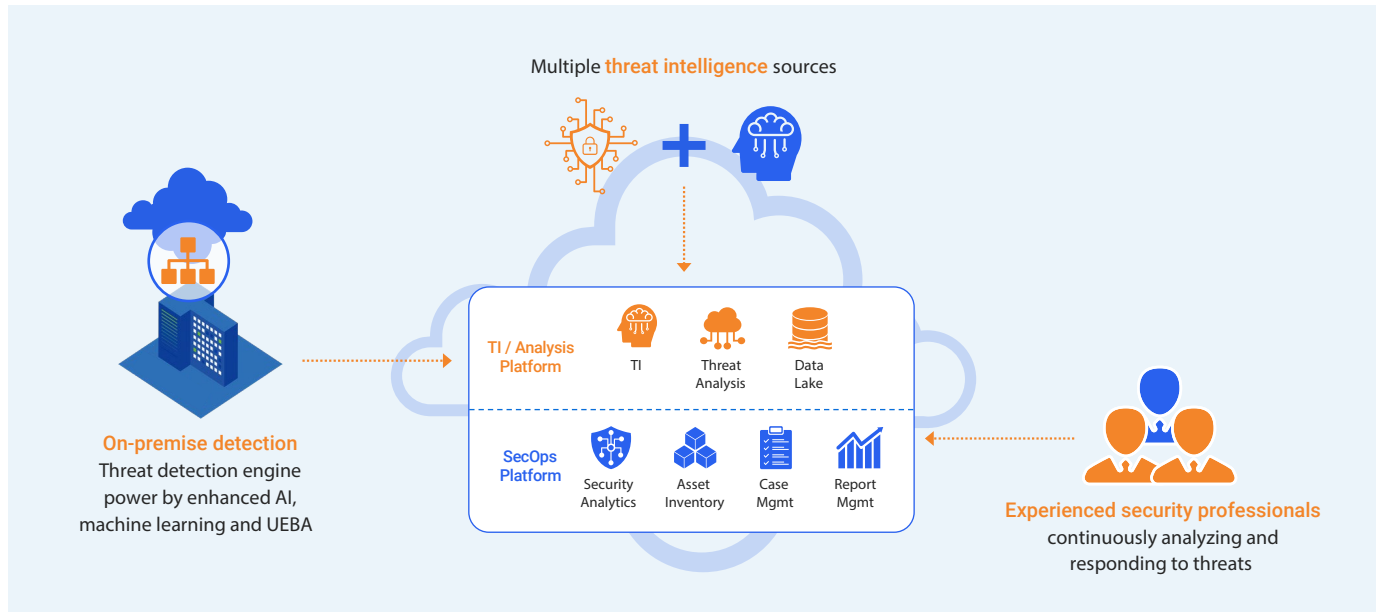

Customer Values

01
Full visibility on network & endpoints, constant expert guidance to improve cybersecurity.

02
Immediate response on cyberthreats without need to internally hire cybersecurity team.

Multiple **threat intelligence** sources

On-premise detection
Threat detection engine power by enhanced AI, machine learning and UEBA

TI / Analysis Platform — TI, Threat Analysis, Data Lake

SecOps Platform — Security Analytics, Asset Inventory, Case Mgmt, Report Mgmt

Experienced security professionals
continuously analyzing and responding to threats

🌐 Streamlined Security Operation

Cyberthreats are constantly evolving while IT infrastructure complexity grows. Zero-day exploits, supply chain attacks and more and more focussed advanced cyberattacks are daily business for security teams.

With our ForeNova platform & services we enable our customers to orchestrate their security infrastructure to use the complete existing toolkit to detect & respond to any cyberthreat in the best possible way. No more silos in your security infrastructure, just immediate counter on any cyberattack.

ForeNova already offers integration with other major security solution vendor and is able to quickly integrate with any other existing solution via its flexible modern API.

Other ForeNova Solutions

NovaTA
- Let experts inspect your network and investigate threats with this service. Find any compromised devices with a full report and clear instructions to improve overall security.

NovaCommand
- Best-in-class NDR solution to automatically detect threats in your network. Customizable playbooks can orchestrate immediate responses. NovaCommand offers integration with all major security solutions and is a must-have addition to traditional endpoint security & firewall solutions.
