KELA

CYBERCRIME ATTACK SURFACE VISIBILITY

Reveal your cybercrime attack surface as seen from the eyes of attackers by monitoring cybercrime internet sources for essential organization assets.

Security professionals are overwhelmed with false-positive alerts and hours of manual threat analysis.

The threat landscape is constantly mutating and evolving. Its most harmful operations are hidden in its darkest corners.

KELA's platform delivers automated threat intelligence with the targeted & contextualized insights organizations need to stay ahead of attackers.

OVERVIEW

HOW IT WORKS

Extensive Source Collection – The platform continuously collects intelligence from a variety of hard-to-reach sources, including forums and markets, closed instant messaging channels, and other illicit hacking services.

Sophisticated Reporting – The platform automatically generates machine-readable reports on intelligence such as leaked databases, exposed ports and hosts in your network, compromised accounts or stolen credit cards.

Available, Actionable Data

Intuitive and interactive dashboards deliver timely threat intelligence focused on hacking discussions, instant messaging, leaked credentials, network vulnerabilities, compromised accounts, and additional intelligence reports.
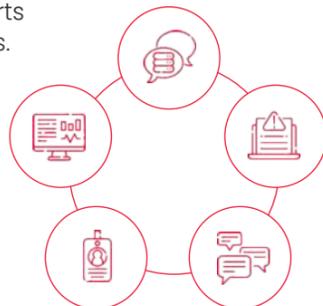

> Over the past two years, KELA's platform provided alerts that were critical to our bank. KELA helped us to mitigate these risks. Overall, the platform is responsible for a 5-7% reduction in credit card fraud for our bank.

BENEFITS

Contextualized intelligence

Tailored monitoring and alerting allow you to configure specific assets to track threats to your organization, your supply chain, your executives and your attack surface, so you can focus on the threats that matter the most.

Complete coverage

Our platform monitors an organization's entire attack surface, mapping the network from the outside in watching the perimeter anddomains for exposed databases, open ports and other vulnerable technologies.

Improved security stack

Leverage the flexible platform API to enrich other key tools in your security infrastructure such as SOAR and SIEM with targeted intelligence from the cybercrime underground.

POWERFUL FEATURES

Real-time Targeted Alerts
Automatic tracking and immediate notification of company assetsspecific cybercrime threats.

Multi-user Communication
Status filtering and a messaging board facilitate communication for organizations with multiple users.

Advanced Management Capabilities
Users gain full control over their intelligence, enabling customized management of the organization's external threat landscape.

Singular Data View
Featuring all available intelligence in a unified hub, providing a clear overview of the entire external attack surface.

Actionable Intelligence
Provides specific remediation recommendations for potential threats to the organization.

Collection in Multiple Languages
Efficient detection of cybercrime threats helps users maintain a reduced attack surface.
