

Storware Backup and Recovery 5.2

Storware is a complete and competitive backup and recovery system for virtual machines, containers, cloud environments, storage providers, endpoints, and Microsoft 365. Storware empowers modern companies to grow smoothly, providing uncompromising protection for business-critical data against cyber-attacks, human error, and other disasters.

Modern Workloads – Storware provides a stable, agentless backup and snapshot-management solution for virtual machines, containers, storage providers, and applications working on-prem and in the cloud. Storware supports multiple backup destinations for convenient data storage planning: local filesystem or an NFS/CIFS share, object storage (cloud providers), or enterprise backup providers.

Endpoints – Storware Backup and Recovery is the next generation of business backup and recovery solutions for Windows and macOS. Storware offers stable data protection on devices such as desktops and laptops to ensure the continuity of business processes. Thanks to the Continuous Data Protection (CDP) function, self-service instant restore, or the native data reduction mechanism (deduplication and compression), Storware guarantees an even more robust way to protect data for the entire organization.

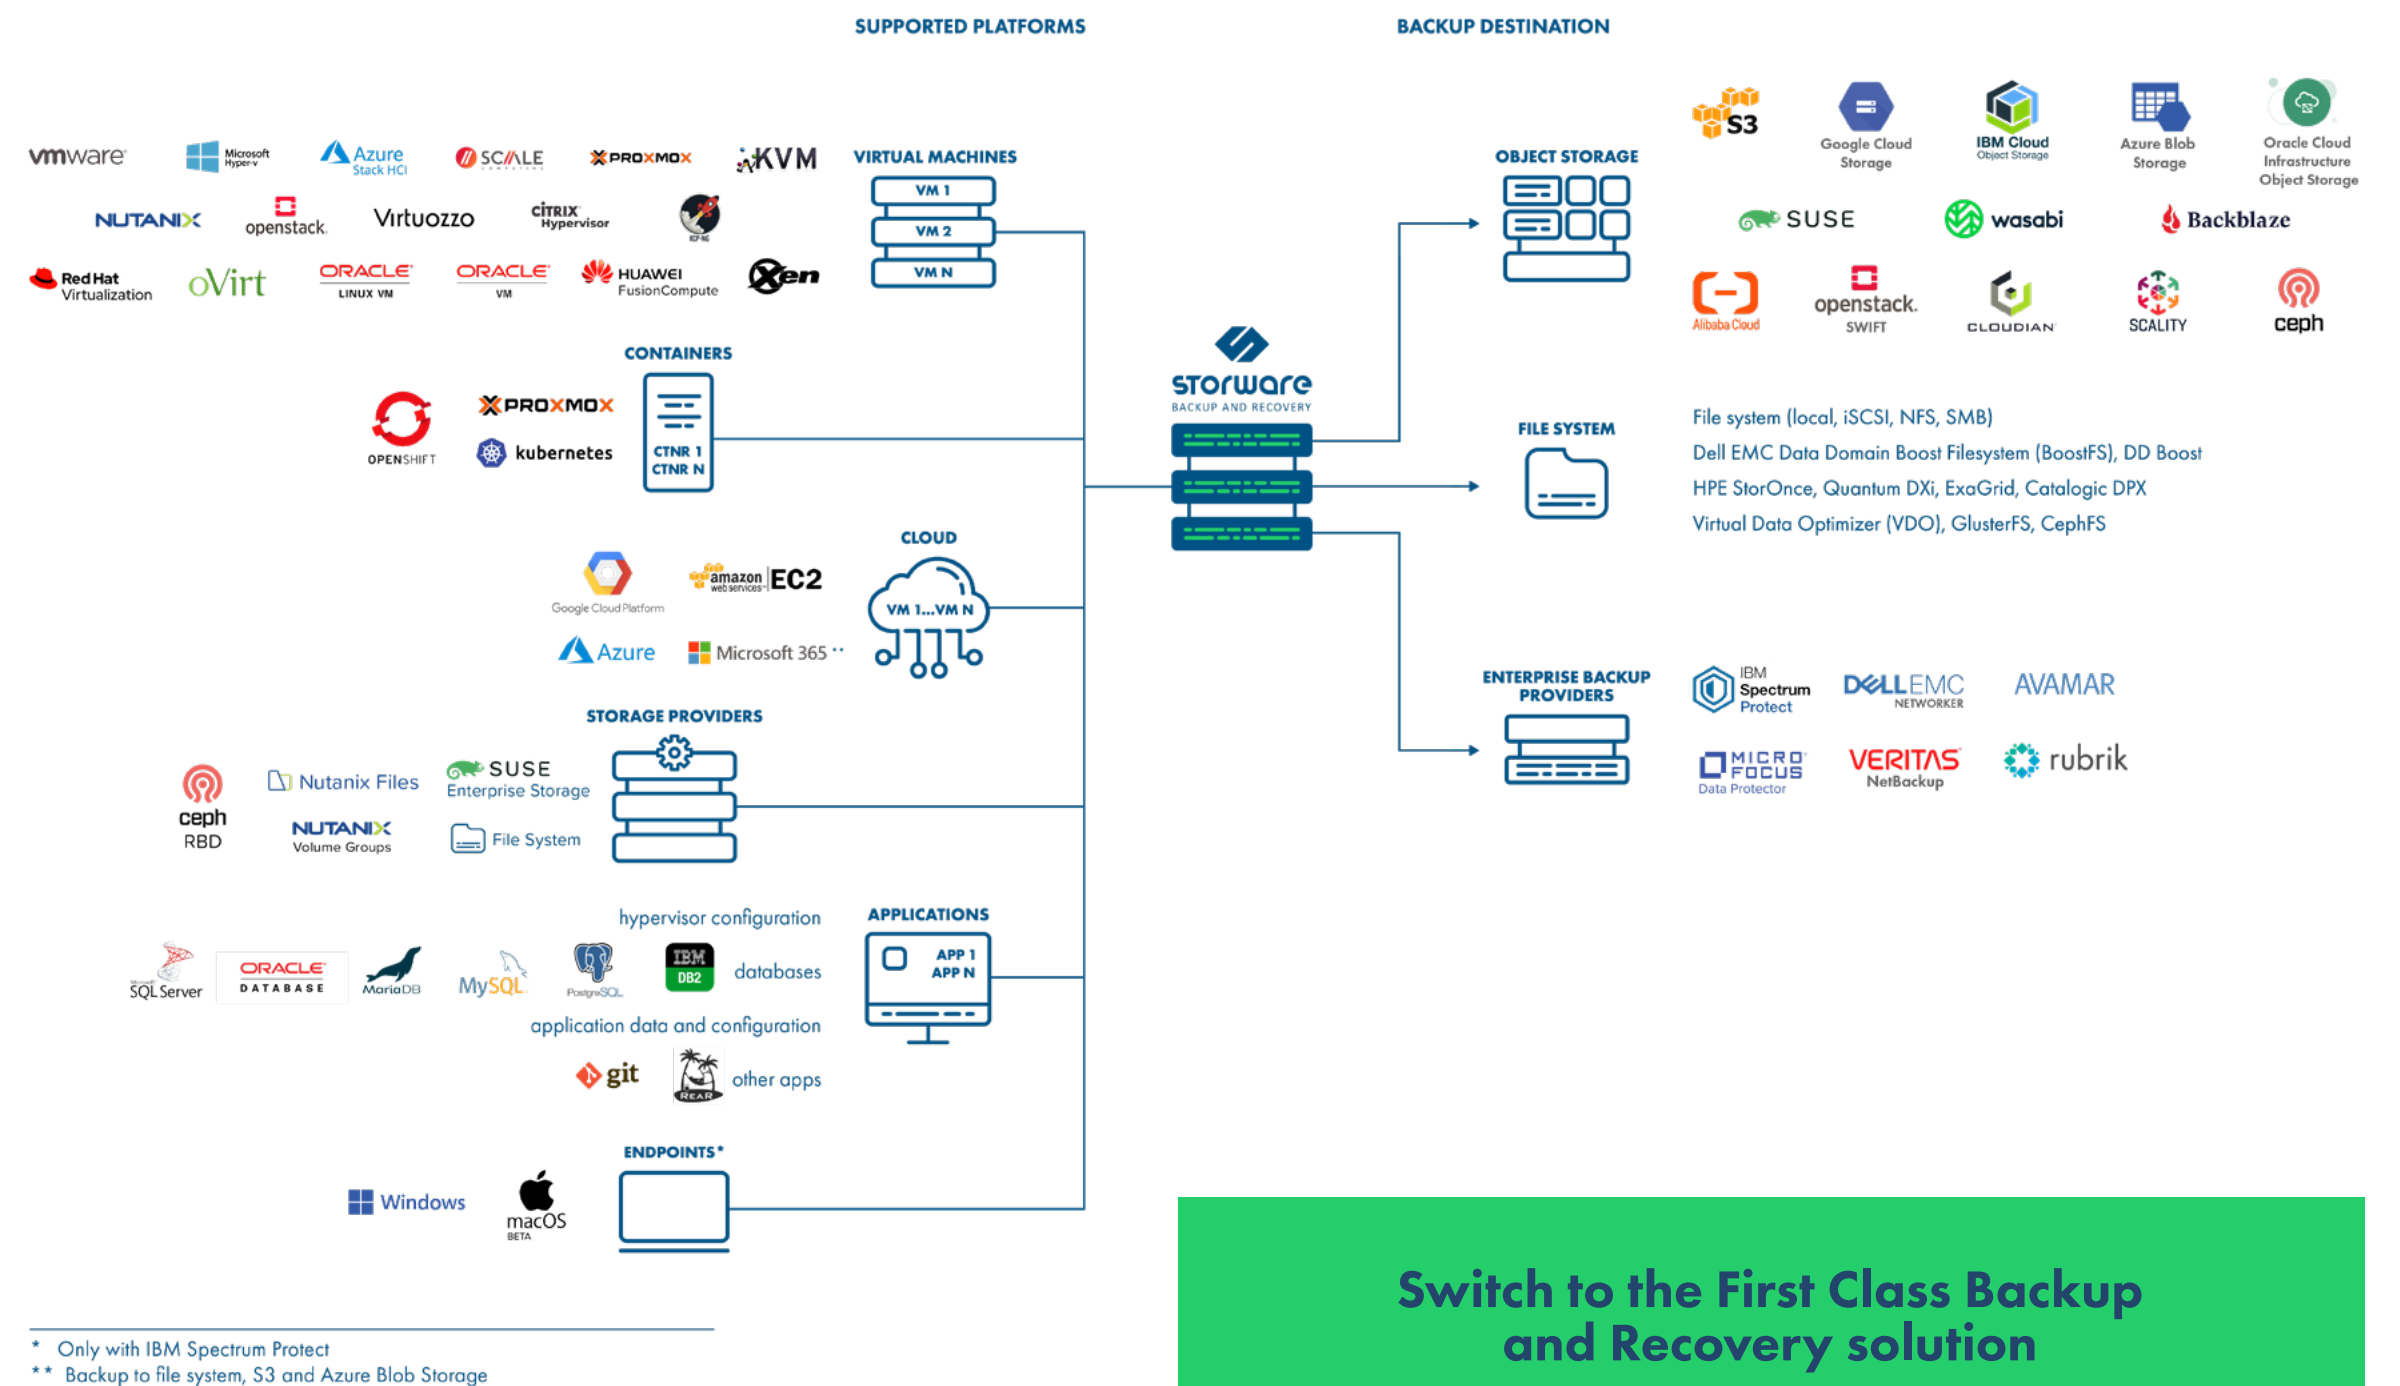

Microsoft 365 – Storware provides backup of Microsoft 365 business data: Exchange Online, OneDrive for Business, Microsoft Teams, and SharePoint Online. Thanks to Storware, you will meet the required security standards in the data storage area, for example, for a 3-2-1 backup strategy. The system offers, among other things, file versioning, compression, and deduplication. Choose a competitive solution to ensure compliance with your company's highest performance and data protection requirements.

Future-oriented Backup & Recovery

Automate thousands of backup tasks with just a few clicks. Secure your test and production environments, applications and databases against cyber-attacks, human error, and other disasters with backups, end-to-end encryption, and role-based access control.

- Available language versions: English, Chinese, Japanese, Spanish, German, French, Polish.
- High-quality global support 24/7.
- Open and documented API for integration with any third-party products.
- A worldwide network of distributors and partners.
