

Product specific terms

Citrix combines desktop and application virtualization, application delivery and security, zero trust, observability into a single platform that enables enterprises to connect any user on any device to any application hosted across multi-cloud environments.

The Gexibility of the Citrix platform ensures you can Find the right combination of features and functionality for your organization. Note that the features and functionality of on-premises products may differ from the features and functionality of cloud products, even when purchased together as hybrid offerings.
