

Toad[®] for SQL Server

Go beyond SQL Server Management Studio (SSMS) to streamline SQL Server development, deployment and administration.

Toad[®] for SQL Server solves the unique challenges faced by SQL Server professionals. It combines comprehensive automation of development and administrative tasks with the deepest functionality available. By providing a range of specialized editions built for your job function, Toad for SQL Server allows you to achieve the highest levels of application and database performance — while making your life easier.

Toad for SQL Server makes it simple to:

- Compare and synchronize schema and table data
- Execute SQL scripts against multiple SQL Server instances
- Roll back transactions from SQL Server transaction logs
- Manage SQL Server agent jobs
- Optimize SQL to improve application performance

“We are constantly looking for ways to do more work more efficiently. Adding Toad for SQL Server provides a greatly extended toolkit that saves time during development, deployment and maintenance. A win at all levels!”

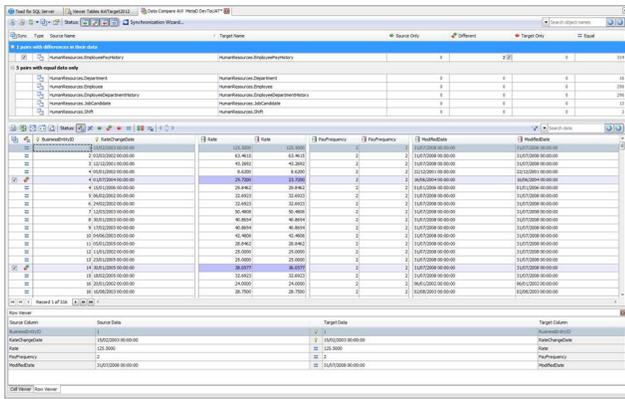

*Michael Lato
Eastern Townships of Quebec*

Main features of Toad for SQL Server:

- **Group execute** — Execute SQL scripts across multiple SQL Server instances. This streamlines administration and development requirements for implementing database changes in a wholesale manner.
- **Compare and synchronize** — Perform data, schema and server comparisons with a few simple clicks. View comparison results and generate the change scripts needed to update the target environment. Scripts can be run interactively or easily scheduled via Toad’s advanced Job Management interface.
- **Transaction log reader** — Recover schema and data from online transaction logs and backup files. Easily review and recover from operations like altered stored procedures, truncated data or inserts, updates and deletes.
- **Job management** — Manage SQL Server jobs and Windows tasks simultaneously through a calendar-style viewer for one or multiple servers.

Benefits:

- Automates routine tasks so you can focus on higher value projects
- Compares and synchronizes SQL Server schemas, objects and data
- Accelerates SQL and T-SQL development
- Automates SQL performance tuning
- Connects to SQL Azure and uses the same Toad features, as if it were an on-premises SQL Server database

Toad for SQL Server's comparison features make it quick and easy to find differences and synchronize them.

- **SQL Optimizer** — Identify potential performance issues, automate SQL optimization and generate the best-performing SQL alternatives. Also, utilize index optimization and plan-change analysis.
- **SQL Script Recall** — Reference all SQL statements executed against the database environment, as they are all saved automatically. These statements can be searched, recalled and saved, allowing you to quickly locate statements for review and long-term use.
- **Debugger** — Perform advanced SQL and T-SQL script debugging. You can quickly analyze and debug code in order to set breakpoints, debug nested calls, and monitor local, global and custom variables and expressions.
- **Automation** — Automate and schedule routine and redundant tasks to save time and allow you to focus on higher value tasks.
- **Version control** — Integrate object-level version control support for Microsoft Team Foundation Server (TFS), Visual SourceSafe, Concurrent Versions System (CVS) and Subversion.
- **Maintenance plan designer** — Use a familiar and intuitive interface for designing and maintaining your SQL Server maintenance plans. Maintenance plan backup tasks support LiteSpeed for SQL Server.
- **Community involvement** — Gain online community-based expertise and support through [Toad World](#) to help you build, manage and better understand your SQL Server environments so you can get the most out of them.

- **Subscription versions available** — Allows for online license administration to manage assets and auto-update functionality to keep you up to date with latest version available.

SYSTEM REQUIREMENTS

Platform

- 2 GHz processor (recommended minimum)

Memory

- 8 GB of RAM minimum, 16 GB recommended

Hard disk space

- 800 MB to install Toad®
- 104 MB to run Toad®

Operating system

- Windows Server® 2022
- Windows Server® 2012
- Windows Server® 2012 R2
- Windows Server® 2016
- Windows Server® 2019
- Windows® 8.1 (32-bit or 64-bit)
- Windows® 10
- Windows® 11

Database server

- SQL Server 2022
- SQL Server 2012 and SQL Server 2012 Express
- SQL Server 2014 Enterprise and SQL Server 2014 Express
- SQL Server 2016
- SQL Server 2017
- SQL Server 2019

About Quest

Quest creates software solutions that make the benefits of new technology real in an increasingly complex IT landscape. From database and systems management, to Active Directory and Office 365 management, and cybersecurity resilience, Quest helps customers solve their next IT challenge now. Quest Software. Where next meets now.
