SUSE Linux Enterprise Desktop

Be more productive with market-leading usability and bullet-proof security

Benefits of...

Enhanced business productivity. SUSE Linux Enterprise Desktop is a powerful desktop operating system with modern applications for efficient collaboration of enterprise employees.

Secure. SUSE Linux Enterprise Desktop is a part of enterprise-grade OS family and benefits from superior security features – application-level security system (AppArmor), a firewall, integrated VPN and antivirus tools to protect information from malware and virus attacks. AppArmor provides full control over access rights for desktop applications. The modular OS architecture isolates the OS elements making it increasingly challenging for security flaws from one part of the system impact another. SLE Desktop by default restricts access rights for all users so no modifications can be made neither to system files, nor to other users' directories. Rest assured that your invaluable enterprise data remains safe.

Reduce costs. SUSE Enterprise Linux Desktop comes with a complete suite of modern business desktop applications, such as email client, web browser, IM chat, multimedia player, LibreOffice and collaboration tools, - all at no extra cost. Your employees can be productive right from the start.

Flexibility, configurability and high degree of customization. Every element of desktop can be configured to for specific needs. Desktop customization includes thin-client deployments – frequent requirement in some industry use-cases (such as healthcare), granular control of the installation image and desktop lock-down for restricted use.

Interoperability and easy management. SUSE Linux Enterprise Desktop seamlessly integrates with UNIX, Windows, MacOS and other operation systems creating a friction-free IT environment. It includes a suite of tools to simplify installation, configuration and updating of Linux Desktop. Use SUSE Manager for centralized management and updating of your desktops.

Key Features

- **Intuitive graphical interface.** Developed using "Design First" methodology to deliver a user-friendly Linux desktop with intuitive menu for a seamless user experience.
- **Accessibility.** Provides a range of tools, such as Orca screen reader for Braille input, to comply with assistive technology standards and to assist users with disabilities to use the OS and be efficient in the business environment.
- **Integrated powerful search.** Features a real-time indexing function to assist with locating documents in a matter of seconds.
- **Localization.** SUSE Linux Enterprise Desktop is ideal for deployment around the globe. In addition to English, German, Spanish, Italian, French, Portuguese, it supports Chinese, Dutch, Czech, Polish, Russian, Hebrew and other languages.
