

HPE Integrated Lights-Out portfolio

Your server management engine

Traditional server management and provisioning can create unnecessary burdens for many organizations. Information technology (IT) administrators in today's business environments need a more streamlined process to manage servers throughout the IT lifecycle, including tools to help them diagnose problems and procedures for efficiently resolving errors. The key capabilities of HPE Integrated Lights-Out (HPE iLO) are embedded in every HPE ProLiant Gen9 and Gen10 server, the solution's scalable licensing offerings, and mobile app features that support IT staff—anywhere, anytime.

Out of the box, HPE iLO simplifies server setup, provides access to server health information, enables server management at scale, improves server power and thermal control, as well as basic remote administration.

With the HPE iLO management, you can automate your common tasks during each step of the server lifecycle, from initial deployment to ongoing management and service alerting. This translates to faster time to deployment, higher server, and application availability through ongoing health monitoring, and significantly quicker time to resolution when issues arise.
