

## End-to-end product development made easy

Built on top of monday.com Work OS, **monday dev** gives you everything you need to plan, execute, and collaborate to deliver better products all on one platform — from ideation to deployment.

## Sprint through every development process your way

With monday dev, you can customize any process or workflow for your exact needs and methodologies, whether you use Scrum or Kanban, Agile or Waterfall. Connect and empower all your teams to move quickly and exceed your goals.

-  Roadmap planning
-  Features backlog
-  Scrum/Kanban management
-  Retrospective
-  Bug tracking
-  Incident reports

## Adapt instantly with end-to-end product management

- **Sprint planning:** Break down your vision into actionable sprints. Easily view your roadmap's progress, understand who's doing what, gain clarity on estimated vs. actual story points, and receive instant updates in one workspace.

Create Sprint

- **Features and releases:** Prioritize features your customers want to use. See which accounts generated each product request to understand the real value of each feature and easily plan your feature roadmap and product releases to keep your entire team aligned.
- **Roadmap:** Plan, prioritize, and map your product vision. Build custom roadmaps to see everything from product and company goals to sprint planning — all in one high-level overview.
- **Product workflow templates:** Get started instantly with templated, customizable workflows — pre-built with tasks, owners, widgets, automations, dashboards, and more. Or easily build your own using monday.com building blocks.

- **Kanban view:** Create a continuous visual workflow and gain full transparency into your team's development tasks to maximize efficiency.

## Break down silos to drive effective collaboration

- **Resource allocation:** Balance team resources and adapt to changing priorities with the Workload View. Plan for the future and adjust as you go, distribute responsibilities accordingly, protect deadlines, and prevent burnout.

- **Gantt tracking:** View a clear timeline to plan and monitor performance against KPIs. Customize your Gantt chart to manage dependencies and see progress by individual team members, teams, or features, ensuring timeline success.

- **Real-time updates:** Communicate directly on tasks to shorten feedback loops, inspire action, and provide all stakeholders status updates in real-time with smart notifications.

- **One source of truth for all workflows:** Streamline your entire development workflow and provide all stakeholders instant visibility into the roadmap, sprints, backlog, bug tracking, status, updates, and more.

## Track and optimize at any stage of the lifecycle

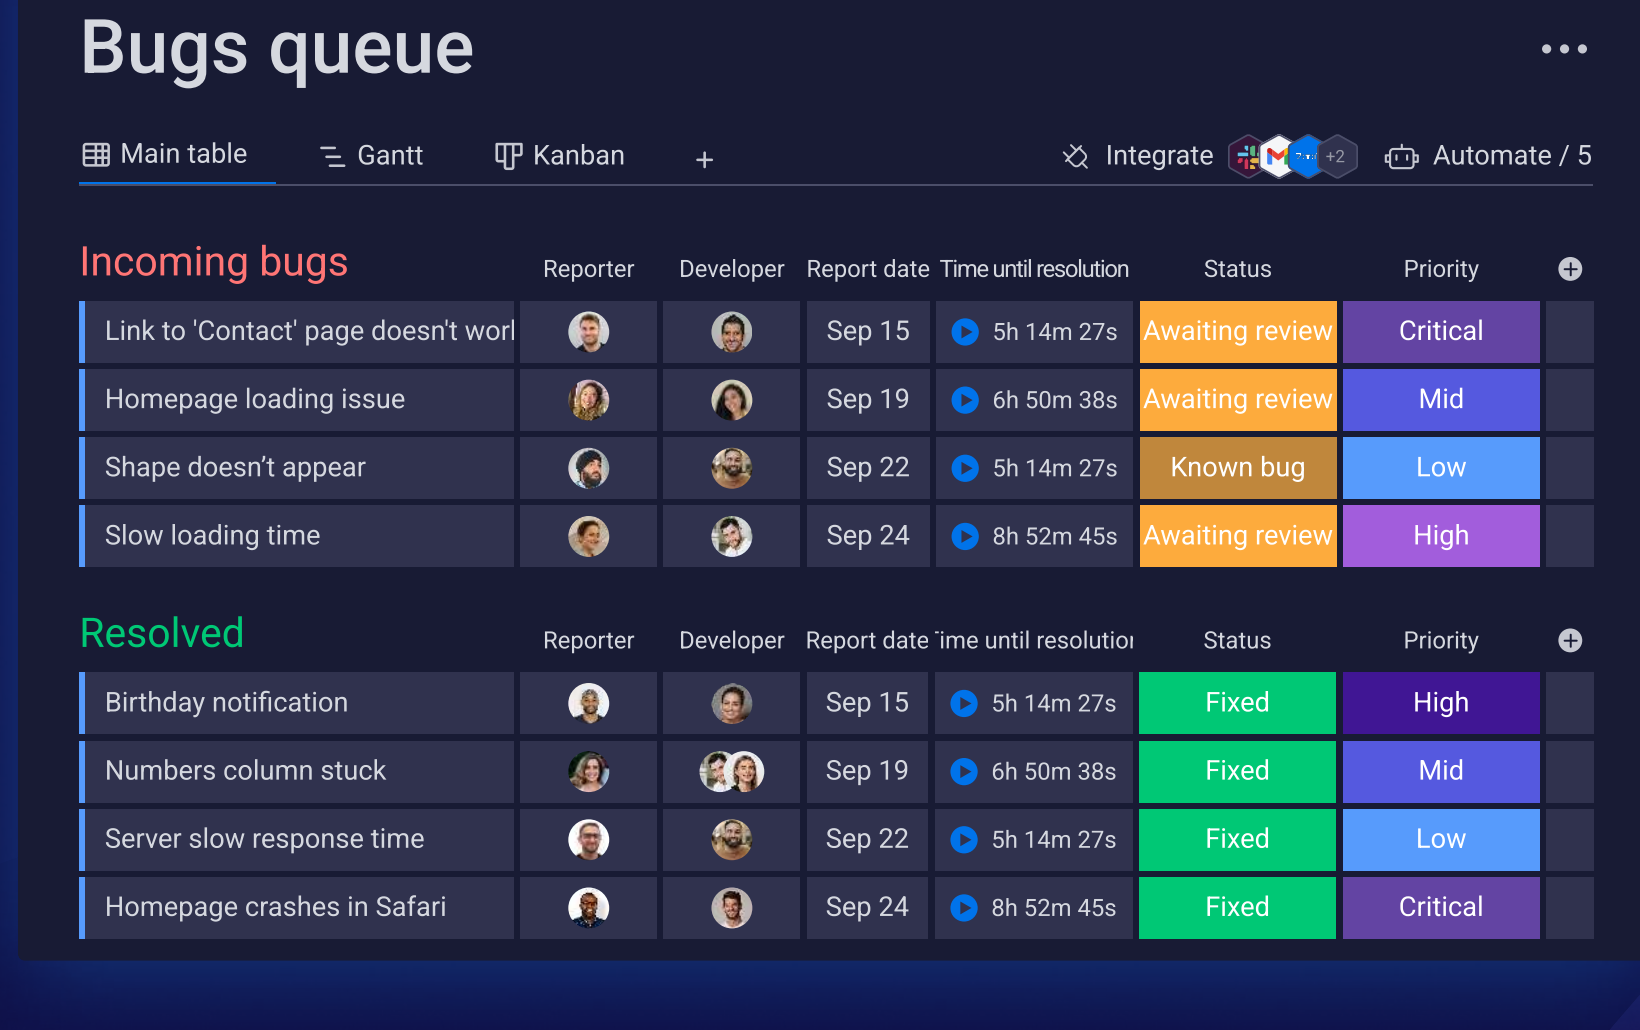

- **Agile reporting:** Document, monitor, and prioritize issues that arise during development using views and widgets to show real-time reports, velocity charts, and burnup or burndown charts.

- **Incident report:** Easily report and capture all occurring incidents for faster resolution and clear reporting.

- **Achieve agile at scale:** Drive agile at the team level by allocating epics to teams instead of individuals while applying the same sustainable principles, practices, and outcomes at other layers of the organization.

- **Retrospectives:** Discover your team's best practices. Look back at past iterations and implement lessons learned in a board shared across your organization. Leverage team voting and turn the results into an action plan, using team consensus to determine the most critical issues.

- **Bug tracking:** Get instantly notified as bugs occur. Receive bug reports via custom form submissions, so you can assign an owner, prioritize, and identify problematic areas for improvement.

## Manage your entire product roadmap without toggling between tools

- **Powerful automations:** Leave repetitive work behind by setting up custom automations within minutes. Choose from over 150+ predefined recipes or easily build an automation to fit your needs.

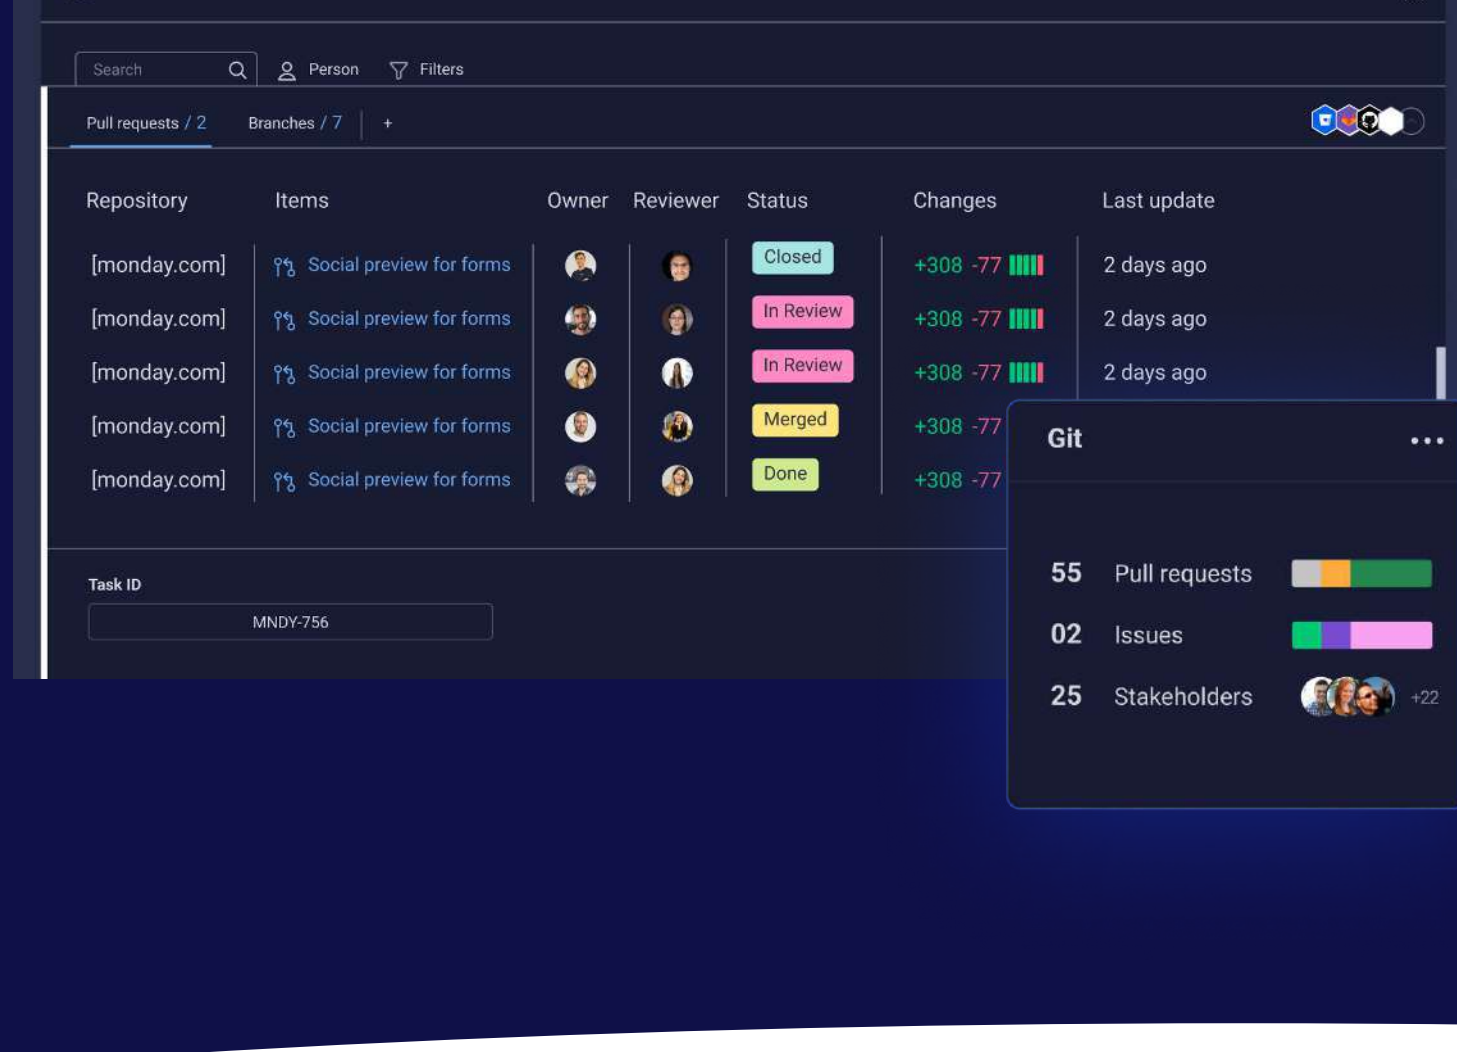

- **Connect directly to the tools you already use:** Integrate monday.com with all the tools you already use, through code-free integrations or an open API to create one unified workspace.

When a **status** changes to **something**, create an issue in **this repository**

When an item is created, create an issue in **this repository**

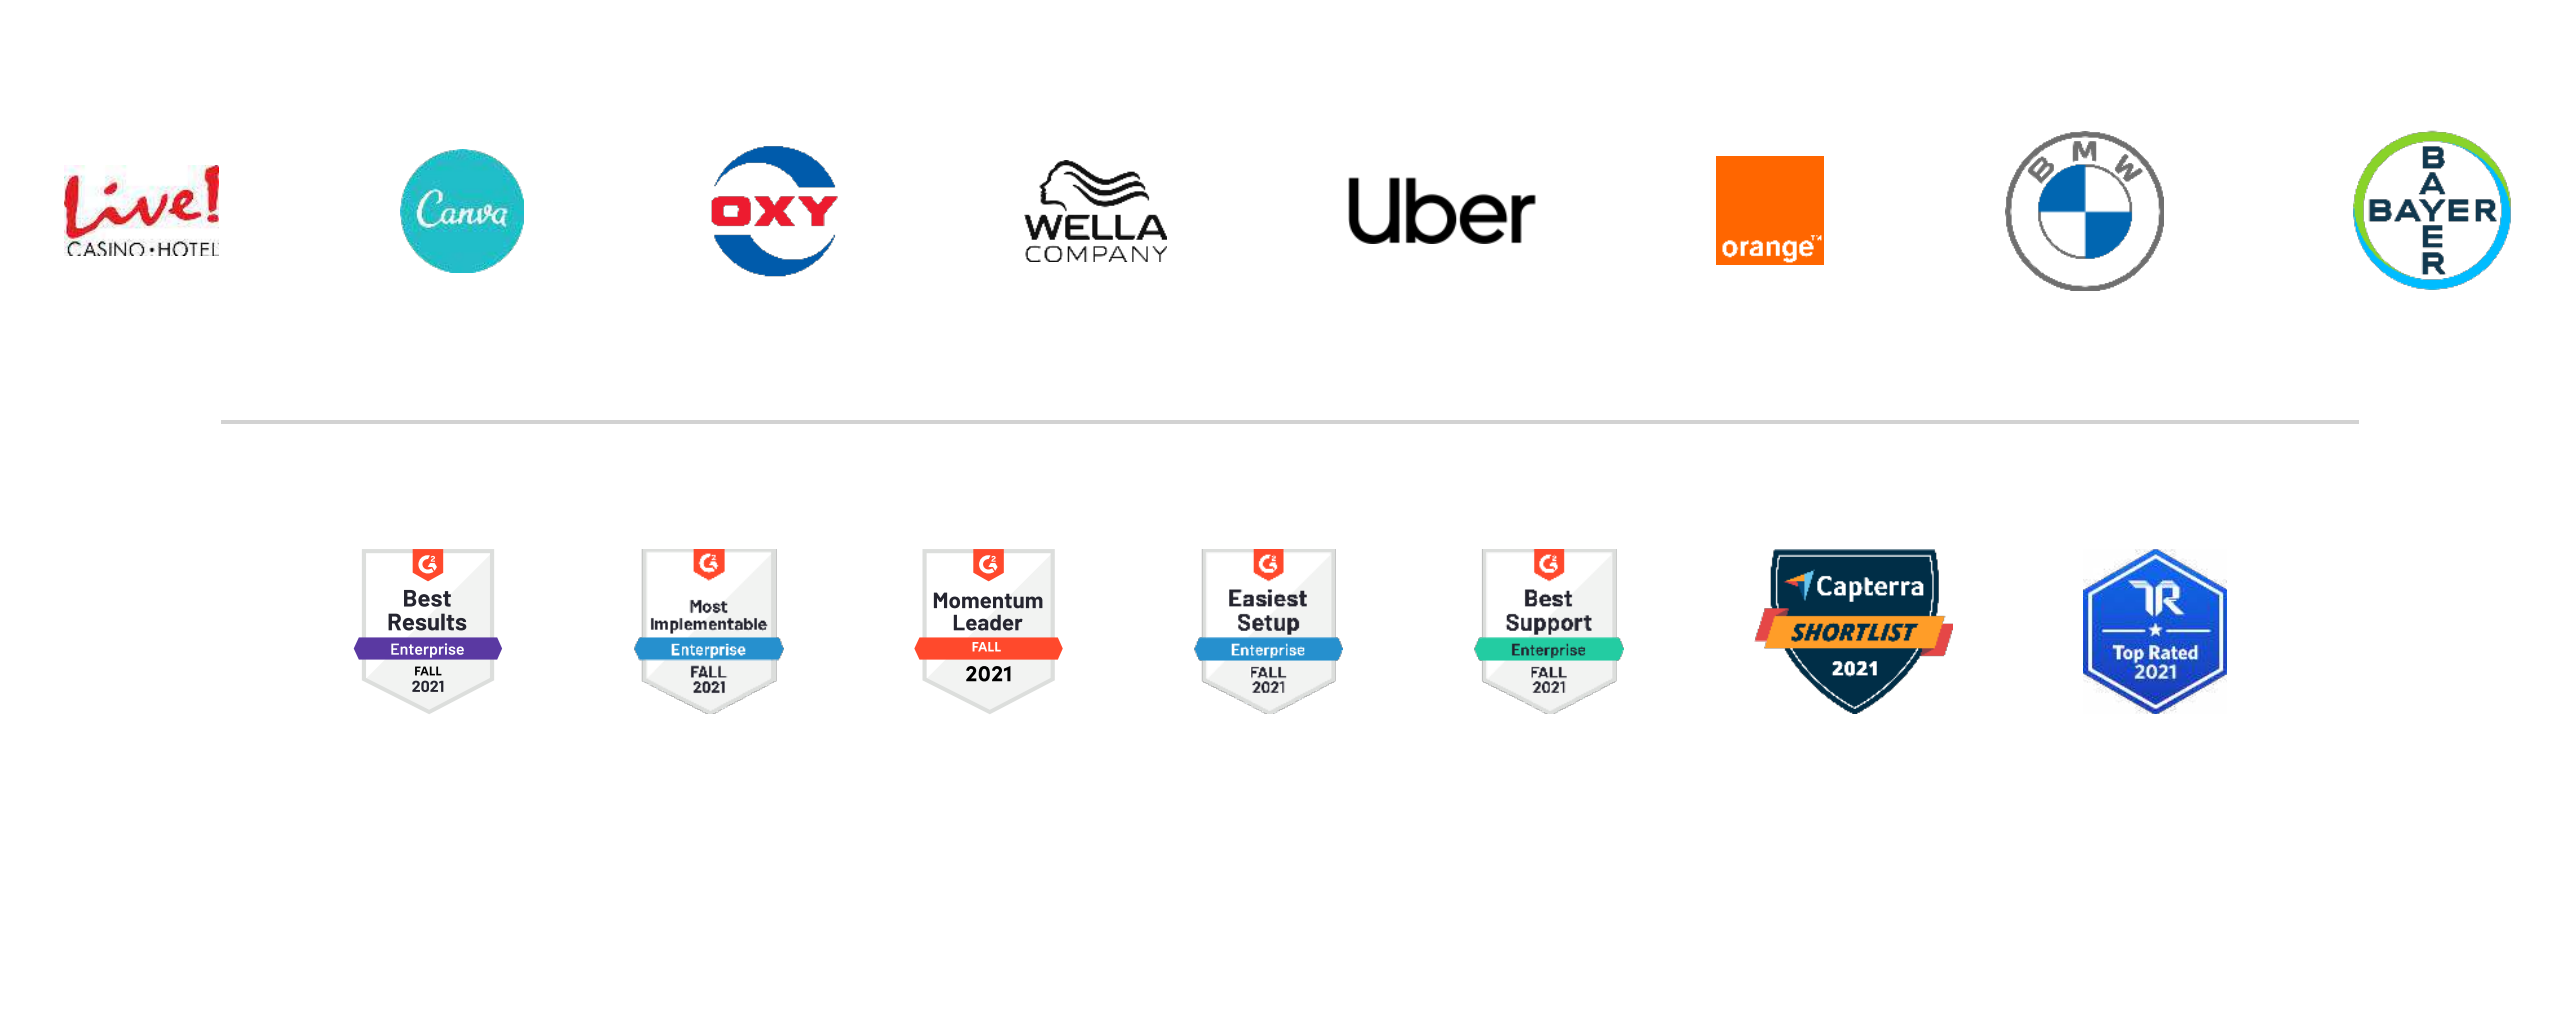

When tagging a commit in **this repository**, create an **item**, with **this prefix**

- **Code repository integrations:** Turning existing code repositories into a single source of truth by setting up automatic updates on task progress resulting from code changes to align the organization on the most updated status of each change.

\*This feature will be released in Q2, 2022.

## Trusted by 152,000 customers worldwide

“

Migrating from Jira to monday.com Work OS enabled our R&D department to leverage a product tailor-made to our needs with the ability to work with other departments in the same platform.
